

PRO Provider

Assess markets. Rank Networks.
Detailed plan network comparison and analysis with just one search!

PRO Provider gives agents an advantage to win new business and streamline their work. We have the health plan provider data you need to make instant, informed decisions. Determine with confidence which networks contain your clients' most important providers.

You have the power to create a wide range of reports that deliver invaluable information:

Assess markets

Analyze networks by comparing all physician, hospital, and dental providers that are currently being contracted; the network size; overlap; and exclusive providers between networks. That way, you can find the best fit for your business clients. You can know with confidence the best networks available to your clients based on their specific geographic areas.

Look up providers

With a single search, look up provider participation status across multiple networks that are identified as being contracted with the provider or hospital. You no longer have to waste valuable time laboring from website to website. We give you instant search results for the doctors, hospitals and dentists in your market. What used to be measured in hours can now be accomplished in just minutes.

Create a directory

Create a list of providers by specialty for your clients within a specific radius and network.

Rank Networks

Rank Networks allows you to:

- Search for the most important dental and medical providers, hospitals and medical groups
- View the best-fit networks based on provider participation
- Find the providers that are not participating in a network
- Survey plan participants

PRO Provider quickly generates an anonymous, employer-specific link to survey employees. This allows employees to identify their providers so your groups can find the best network for them during the plan-selection process.

Step 1: Rank Networks

- A Search for providers by name.
- B Add providers to the list.
- C Review top networks by provider.

Rank Networks

Identify the best networks based on a list of key providers
